

# FLOOR TO CEILING HEIGHT OF THE BAKEHOUSE THEATRE – MAIN STAGE

## **Bakehouse theatre stage height:-**

- **From the "nominated" front of stage line,(about a metre from the front row of audience seats) the ceiling is one height from floor to actual ceiling of 3.67 metres.**
- **300 metres further back stage the ceiling begins to slope, ending with a measurement floor to ceiling taken on the back wall of the theatre of 3.5 metres**
- **Both these measurements are the actual physical height of the ceiling, without taking into account the lighting bars. The lighting bars, beams etc would take off, 25cms of this height**
- **At the front of the stage, on each side of the ceiling are two large speakers. This reduces the height in those two corners by 70cms, but only takes up a depth from the front of stage line of 18cm, so if your set is backstage of these speakers then you don't have to take these into account in your design.**
